

Ova/Parasite

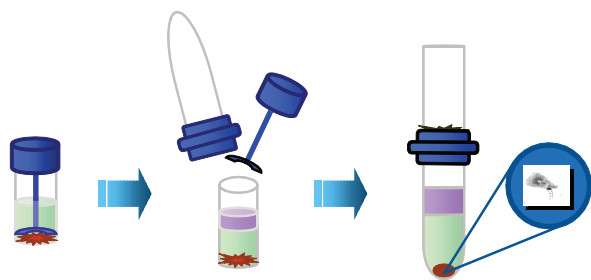

Detection Kit

8 DIFFERENT KITS

Epitope Diagnostics offers serological tests for antibodies against *Giardia lamblia* and antigen detection tests for fecal *Giardia lamblia*, and *cryptosporidium parvum*. These tests include eight different types of products from three different categories of methodology, including ELISA, immunochromatographic rapid tests, and parasite concentration.

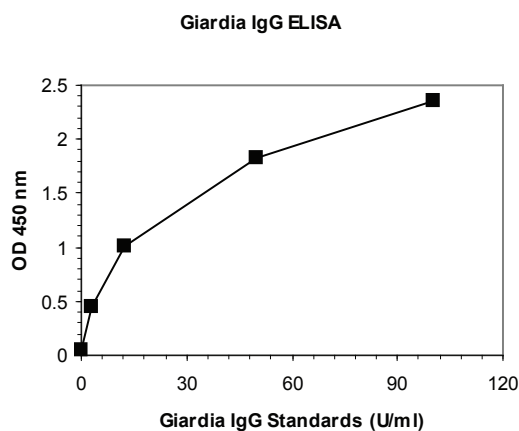

Fecal Ova/Parasite Concentration Kit, FPC-200

- 25 tests per kit
- Optimum sample recovery
- Enhanced sample clarity
- Single-use (no sample contamination)
- User-friendly
- Minimized exposure
- Inexpensive

ELISA Kits for Giardia lamblia and Cryptosporidium parvum

- Anti-Giardia lamblia IgA ELISA, KT-845
- Anti-Giardia lamblia IgG ELISA, KT-846
- Anti-Giardia lamblia IgM ELISA, KT-847
- Fecal Giardia lamblia Antigen ELISA, KT-838
- Fecal Cryptosporidium parvum Antigen ELISA, KT-839

- Simple test format and procedure
- Differentiates between past vs current infection
- Monitors the effectiveness of treatment
- Tracks any reoccurrence
- Serves as confirmation tests

Immunochromatographic tests for all laboratories

- Fecal Giardia lamblia Antigen Rapid Test, KT-927
- Fecal Cryptosporidium parvum Antigen Rapid Test, KT-928

- Patented technology
- Highly sensitive and specific
- Very simple test procedure
- Results in 5 minutes
- Closed test system
- Clean and prevents any contamination
